Subject: FW: Osprey pole relocation

Hey Brett,

I was contacted by a staff member from ATC who read the article about the osprey nest at the high school being removed due to the light removal. He involved Pat Ready about where the best replacement location would be and he thought somewhere close to Paradise Pond since the ospreys fish it. He said the location below would work. Who would grant the approval for this location? Public Works Committee? And would the placement in this area affect mowing? I'm assuming if you use zero turns it's no big deal but different if you use the large tractor.

ATC has the pole and platform, and he already talked to SU about installation.

Thanks
