

OFFICIAL NOTICE AND AGENDA

Notice is hereby given that the Public Works Committee of the City of Stoughton, Wisconsin will hold a regular Public Works Meeting as indicated on the date, time and location given below.

Meeting of the: **Public Works Committee of the City of Stoughton**
Date /Time: **Thursday, March 16, 2023 at 6:00 pm**
Location: **This meeting will be available as Hybrid meeting**
Stoughton Public Works Facility, 2439 County Rd A
Please join my meeting from your computer, tablet or smartphone.
<https://meet.goto.com/319605469>
You can also dial in using your phone.
United States: +1 (646) 749-3122
Access Code: 319-605-469

Members: Tom Majewski, Jean Ligocki, Fred Hundt, Rachel Venegas, Kay Rashka, Jeffrey Bartzen and Mayor Tim Swadley

Item # CALL TO ORDER

1. Call to Order
2. Certification and Compliance with Open Meetings Law
3. Communications
4. Approve Minutes of the February 16, 2023 Meeting

Item # OLD BUSINESS

5. Review and Potentially Approve Amendments to Ordinance 62-2 and Bulky on Call Program Set out Limits
6. Amending Section 66-904(8) of the Stoughton Municipal Code – Stormwater Basin Aesthetics

Item # NEW BUSINESS

7. R- -2023 - Wisconsin Department of Natural Resources (WDNR) Urban Nonpoint Source and Stormwater Grant
8. Repealing and Recreating Sections 10-122 through 10-135 of the Stoughton Municipal Code Chapter 10- Relating to Erosion Control and Storm water Management
9. Future Agenda Items
10. Adjourn

ADJOURNMENT

cc: Council Members, City Leadership Team, City Attorney Matthew P. Dregne,
Library Administrative Assistant Sarah Monette, Stoughton HUB
stoughtonreporter@wcinet.com, stoughtoneditor@wcinet.com

NOTE: AN EXPANDED MEETING MAY CONSTITUTE A QUORUM OF THE CITY COUNCIL

Public Works Committee
Thursday, February 16th, 2023
(Hybrid Meeting)

Members Present: Tom Majewski, Kay Rashka, Rachel Venegas, Jeffrey Bartzen and Mayor Swadley

Absent/Excused: Fred Hundt & Jean Ligocki

Staff: Public Works Director Brett Hebert, Planning Director Rodney Scheel

Guests:

Call to Order: *Majewski* called the meeting to order at 6:04 PM

1) **Communications:**

- *Director Hebert* advised that the Public Works crews have been out all day working hard to keep main roads open and he is hoping everyone is able to go home by midnight tonight.

2) **Approve January 19th, 2023 Meeting Minutes:** Motion by Rashka to approve the minutes and seconded by Venegas. Motion carried 5-0.

3) **Old Business:** Amending Section 66-904(8) of the Stoughton Municipal Code – Stormwater Basin Aesthetics

Director Scheel presented the current ordinance and highlighted the area that was modified in 2021 along with the suggested language provided by *Majewski*. This was taken to Council the night before for the first reading. He also stated he has been working with consultants and they provided suggested more specific language for consideration as well as an exhibit to visually put into perspective. *Majewski* agreed it was more technical and liked that the landscaping requirements were also addressed since it hadn't been before. However, he advised that he thought the language that was discussed at last month's meeting should also be included as well as a better diagram. *Director Scheel* will continue to work with the consultants to compile alternate wording as well as a new diagram and bring back to Public Works before it goes to Council for a second reading.

This has been Tabled to next month's meeting.

New Business:

4 **Review and Approve the Contract for Tree Removal Service**

Director Hebert stated that they received two bids for tree removal services that included costs for emergency work as well; although the Forestry Department as much as they can in house there are times such as emergency work that they do need to contract out for. *Director Hebert* also presented

a spreadsheet of costs for each company; Tree Wise Men (who we currently use) as well as Jim's Tree Service (who we've used in previous years)

**Motion by Majewski to approve contract for Tree Removal Services, seconded by Venegas.
Motion carried 5-0**

5) Review and Potential Approval of Amendments to Ordinance 62-2 and Bulky on Call Program Set out Limits

Director Hebert stated the City of Stoughton has had a bulk collection program for ten years. This service collects bulky items curbside once per month for items that will not fit into the standard trash or recycling cart. Currently there are no limits as to what can be set out at the curb and how much of each specific item(s). *Director Hebert* offered amendments to the ordinance to get the Committee's feedback on this before sending to a lawyer for consulting. Hem then also presented a list of acceptable items and how many of each to set perimeters so that residents aren't abusing the service. Discussion was had about how the current ordinance is not currently very specific and the list of acceptable items should be more refined to specify if a resident or property owner could put all of these items out at once or if there is a limit of how many items per pick up.

This has been Tabled for next month's meeting for more specifics.

7) Future Agenda Items:

8) Adjourn: Motion to adjourn by Venegas, seconded by Bartzen to adjourn the meeting at 7:14pm pm. Motion carried 5-0

Respectfully submitted by Jen Wagner 2/17/2023

Date: February 28, 2023

To: Public Works Committee Members

From: Brett Hebert – Director of Public Works

Subject: Bulk on Call Program Limits

Public Works Committee Members,

The City of Stoughton has had a bulk collection program since for over ten years. Johns Disposal collects bulky items curbside once per month for items that will not fit into the standard trash or recycling cart. For the most part, our residents do not abuse or take advantage of the program. On occasion, some residents set out an excessive amount of trash to be collected as part of the bulk collection program.

Many of these instances of abuse are from homeowners or tenants moving out. Some may be from excessive trash accumulation from various sources throughout the month.

Currently, there technically are no limits to the amount of volume that residents can put out to the curb for John Disposal to collect. The types of setouts in the pictures to the right were not the intention of the program. Neighbors get upset with the amount of trash that is put out at some of these residences and also these large trash piles may attract unwanted rodents to the area. The intent of the program was to collect large furniture items that wouldn't fit in the cart or other items that need to be properly disposed of such as tires. The program is also in place to collect a few extra bags of trash that may not fit in the cart.

With that being said, we would like to institute limits to what residents can set out to the curb. We have been working with John's Disposal to understand what is a reasonable amount of excess trash that should be allowed as part of the bulk on call program.

We would like the committee to consider the following ordinance change to Section 62-2 and Ordinance 62 -37 and subsequent item limits:

Sec. 62-2. - Dumping in park row prohibited.

No person shall dump any refuse, furniture, appliances or junk in the park row unless during scheduled collections authorized by the city. **Oversized or Bulk Trash, as defined in section 62-37, placed on the terrace for collection by the City's contracted hauler, shall not exceed the limits approved by the City Council and shall be listed on the City of Stoughton Public Works Website.** Brush or leaves may be stored in the park row no more than ten days prior to the scheduled collection time authorized by the city. If the occupant or owner does not comply with this article, the city shall notice the owner or occupant, giving them one week to rid the park row of such refuse, then the city shall cause the refuse to be picked up and the expense reported to the finance director, who shall annually enter such expenses on the tax roll as a special tax against the lot or parcel of land, pursuant to Wis. Stats. § 66.0627. The owner or occupant shall also be subject to citation for each violation of this section, with penalties as set forth in [section 1-3](#).

Acceptable Items and Limits:

	Bulk Items	Monthly or Annual Limits
Any Combination of Items Listed in Blue	Excess Trash That Won't Fit in Your Cart	(4) 32 gallons trash cans or (8) bags of trash
	Furniture	(2) Pieces of Furniture
	Appliances (including those that contain CFC's).	(1) Appliance
	Automotive / Light truck tires	(2) two tires per collection, total of eight per year).
	Drain oil or Antifreeze	(5 Gallons) - must be capped / sealed and clearly labeled
	Automotive Batteries	(1) Automotive Battery
	Construction Materials	(2)- 32-gallon containers, weighing no more than 60 lbs.
	Recyclable Materials	Unlimited - Boxes must be broken down and loose recycling material must be contained
Residents Can Substitute the E-Waste Collection Below in Lieu of the Bulk Collection Above Twice Per Year		
	Electronic Waste	(1) electronic per pickup, maximum two electronics per home per year, no household waste may be included with an electronic pickup

Sec. 62-37. - Definitions.

Oversize and bulky waste means large items such as furniture, mattresses, carpeting, and other large items the proportions of which are not easily reduced **or will not fit in the approved trash or recycling cart.** It shall not include construction or demolition materials of substantial dimensions, **or any yard waste material such as leaves, brush or garden plants. or major appliances.**

Respectfully,

Brett Hebert

Director of Public Works

Version as Recommended by Consultant plus Public Works change shown in yellow in body of ordinance

CITY OF STOUGHTON, 207 S. Forrest Street, Stoughton, WI 53589

ORDINANCE OF THE COMMON COUNCIL	
Amending Sections 66-904 (8) of the Stoughton Municipal Code	
Committee Action:	Public Works Committee recommends approval 6 - 0
Fiscal Impact:	None
File Number:	O - - 2023
Date Introduced:	February 14, 2023

The Common Council of the City of Stoughton do ordain as follows:

Sec. 66-904. - Range of required improvements.

(8) *Stormwater drainage facilities.* Whenever in the opinion of the director of planning and development upon consultation with the city contract engineer there is within reasonable distance a storm sewer main, the subdivision or planned unit development shall be provided with a complete stormwater management system which shall connect with such main. If the subdivision or planned unit development is traversed by any watercourse or channel, stream or creek, either live or dry, the subdivider shall dedicate a right-of-way for storm drainage purposes conforming substantially with the lines of such natural watercourse or channel, stream or creek or, at the developer's option, subject to the approval of the plan commission and the public works committee, provide adequate storm drains or other means for the handling of storm flow from and through his property and including the conveyance thereof. In general, the entire stormwater management systems and the disposal of stormwater shall be planned and built to meet the approval of the director of planning and development upon consultation with the city contract engineer.

Aesthetics shall be taken into consideration in the design of stormwater detention "wet" basins, with the goal of appearing more as a naturally formed than as engineered. Wet basins shall have an irregular, curvilinear (rather than rectangular) curving appearance at the permanent pool elevation (see Exhibit 8A), while the top edge of the basin may generally follow straight lines, with the result that the side slopes of the basin between those elevations will vary around the basin. Basin corners at the top edge shall have a typical minimum radius of 25 feet, if attainable, but not less than 10-foot radius. The distance between the top of the containment/embankment and the property line shall vary. The landscaping plan for wet basins shall include a mix of trees and shrub clusters (3 or more per cluster) totaling 15 landscaping points (following Sec. 78.603) per detention basin side or per 100 feet of pond perimeter, whichever provides more plantings, however trees shall be located such that the tree canopy at maturity will remain outside the top edge of the basin to prevent root damage to the basin.

Deleted: Basins shall be designed to appear as a naturally formed body of water with irregular and imperfect flowing shoreline with curving appearance and no angular or geometric shapes. (For example, no perfectly symmetrical circles, ovals, rectangles or squares.)

Formatted: Font color: Auto

Deleted: Curvilinear rather than rectangular shaped basins shall be used wherever possible. Exposed rip-rap shall be kept to a minimum. More extensive areas of rip-rap should be covered with a thin layer of topsoil, turf reinforcement, and sod or be covered by water. Fieldstone shall be used for rip-rap wherever possible to provide a more natural appearance. Structures shall be flush with the ground surface whenever possible. Outlet control structures shall be designed to blend into the side slopes of the basin rather than being exposed in the bottom of the basin. A landscaping plan with a minimum of one tree or substantial bush cluster per detention basin side or per 100 feet of the perimeter, whichever provides more plantings, is required. A minimum of 10 feet of level surface between the top of the detention basin slope and adjacent properties is desired.

Exhibit 8A. Conceptual Typical Section

(Source: Wisconsin DNR Wet Detention Pond Technical Standards)

Exhibit 8B. Conceptual Design

The subdivider shall, at its own cost, construct curbs and gutters, catch basins and inlets, storm sewers, road ditches and open channel drainageways as may be required by the city. All such facilities are to be of adequate size and grade to hydraulically accommodate maximum potential volumes of flow; the type of facility required, the design criteria and the sizes and grades to be determined, to present no hazard to life or property; and the size, type and installation of all stormwater drains and wastewater or sanitary sewers proposed to be constructed, shall be in accordance with the stormwater management plan and the plans and standards specifications approved by the director of planning and development upon consultation with the city contract engineer. Curb and gutter installation may be delayed pursuant to subsection (4). Where such installations are delayed, the stormwater to be conveyed by the curb and gutter management system shall be maintained by the city at the expense of the developer.

Subdividers shall refer to the official map for site-specific standards related to the requirements of this section.

This ordinance shall be in full force and effect from and after its date of publication.

RESOLUTION OF THE COMMON COUNCIL

Authorizing and directing the Director of Planning & Development to prepare and submit a Wisconsin Department of Natural Resources (WDNR) Urban Nonpoint Source and Stormwater Grant

Committee Action: Finance Committee ()

Fiscal Impact: Stormwater Utility Expense for 2024

File Number: R- - 2023

Date Introduced: March 28, 2023

WHEREAS, The City of Stoughton is interested in acquiring a Grant from the Wisconsin Department of Natural Resources for the purpose of implementing measures to control agricultural or urban stormwater runoff pollution sources (as described in the application and pursuant to ss. 281.65 or 281.66, Wis. Stats., and chs. NR 151, 153 and 155); and

WHEREAS, the City is responsible to make improvements to our stormwater system to reduce pollutant loads entering waters of the State, and

WHEREAS, the City is seeking funding for

- Update the City’s stormwater quality management plan, and
- Update the City’s municipal separate storm sewer system map, and
- Conduct wet pond sediment depth surveys, and
- Revise the total phosphorus leaf credit analysis, and

WHEREAS, a cost-sharing grant is required to carry out the project; and

WHEREAS, the grant requires the applicant to designate an authorized position to submit and process required materials; and

THEREFORE, BE IT RESOLVED that the City of Stoughton hereby authorizes the Director of Planning and Development to act on behalf of the City of Stoughton to:

- Submit and sign an application to the State of Wisconsin Department of Natural Resources for any financial aid that may be available;
- Sign a grant agreement between the local government (applicant) and the Department of Natural Resources;
- Sign and submit reimbursement claims along with necessary supporting documentation;
- Sign and submit interim and final reports and other documentation as required by the grant agreement; and
- Sign and submit an Environmental Hazards Assessment Form, if required; and
- Take necessary action to undertake, direct and complete the approved project.

BE IT FURTHER RESOLVED that the City of Stoughton shall comply with all state and federal laws, regulations and permit requirements pertaining to implementation of this project and to fulfillment of the grant document provisions.

Council Action: **Adopted** **Failed** **Vote** _____

Mayoral Action: **Accept** **Veto**

RODNEY J. SCHEEL
DIRECTOR

Date: March 7, 2023

To: Finance Committee

From: Rodney J. Scheel
 Director of Planning & Development

Subject: Stormwater Grant

We have identified a stormwater planning grant that will assist the City with several planning initiatives. The Wisconsin Department of Natural Resources (WDNR) Urban Nonpoint Source (UNPS) and Stormwater Planning Grant provides up to 50% funding up to \$85,000. We propose to submit the grant request to assist with the following items:

- **WinSLAMM Modeling Update** -To account for new and redevelopment since the date of the 2018 Stormwater Quality Management Plan and the approved performance of Paradise Pond. Also, to update to the latest version of WinSLAMM Version 10.5.0, noting that the 2018 plan used WinSLAMM Version 10.2.
- **Municipal Phosphorus Reduction Credit for Leaf Management Program Analysis Update** -The WDNR's 2022 guidance allows up to a 25% TP credit for all residential land uses rather than 17% TP credit for just medium density residential land uses in the 2020 guidance when meeting certain criteria. The City of Stoughton's original credit was 37.72 lb/year TP based on the 2020 guidance.
- **Municipal Separate Storm Sewer System (MS4) Map Update** - To account for new and redevelopment Best Management Practices (BMPs) and outfalls since the date of the 2018 Stormwater Quality Management Plan.
- **BMP Reviews** - Comprehensive BMP reviews to check sediment depth (with a boat) and to do sediment sampling to plan for future dredging.

2024 Stormwater Utility funds would be used for the City portion since the study work would begin in 2024.

The DNR grant requires adoption of a resolution with specific language which is provided for your consideration.

If you have any questions, please contact me.

Mayor Tim Swadley
Engineering Technician Susan Eddy

CITY OF STOUGHTON, 207 S. Forrest Street, Stoughton, WI 53589

ORDINANCE OF THE COMMON COUNCIL	
Repealing and Recreating Sections 10-122 through 10-135 of the Stoughton Municipal Code Chapter 10 Relating to Erosion Control and Storm water Management	
Committee Action:	
Fiscal Impact:	None
File Number:	O - - 2023
Date Introduced:	March 28, 2023

The Common Council of the City of Stoughton do ordain as follows:

1. Chapter 10, Sections 10-122 through 10-135, of the Stoughton Municipal Code is repealed and recreated to provide as follows:

ARTICLE IV. EROSION CONTROL AND STORMWATER MANAGEMENT

Sec. 10-122. Definitions.

As used in this article:

Affected means that a regulated activity has significantly:

- (1) Caused negative impacts on water quality or the use or maintenance of land or business; or
- (2) Endangered health, safety or general welfare.

Agricultural facilities and practices has the meaning in Wis. Stat

s. § 281.16(1).

Average annual rainfall means a typical calendar year of precipitation as determined by the department for users of models such as SLAMM, P8, or equivalent methodology. The average annual rainfall is chosen from a department publication for the location closest to the municipality.

Bank erosion means the removal of soil or rock fragments along the banks or bed of a stream channel resulting from high flow after rain events.

Best management practice (BMP) means a practice, technique or measure that is an effective, practical means of preventing or reducing soil erosion or water pollution, or both, from runoff both during and after land development activities. These can include structural, vegetative or operational practices.

City means the City of Stoughton, Wisconsin.

Closed Watershed means an area that does not have a surface outlet, with water only able to leave through evaporation, infiltration, or mechanical means. For the purposes of this ordinance, the following are considered closed watersheds:

- (a) Internally drained watersheds that are at least 20,000 square feet in area and at least 1 foot in depth from invert to lowest surface outlet.
- (b) Watersheds with no surface outlet discharges from a 2-year, 24-hour design storm.
- (c) Areas that have historically not drained through surface outlets, as determined by the local approval authority.

Cold water community means surface waters capable of supporting a community of cold water fish and other aquatic life, or serving as a spawning area for cold water fish species (section NR 102.04(3)(a), Wis. Admin. Code).

Connected imperviousness means an impervious surface that is directly connected to a separate storm sewer or water of the state via an impervious flow path.

Construction site erosion control means preventing or reducing soil erosion and sedimentation from land disturbing activity.

Department means the Department of Natural Resources.

Design storm means a hypothetical rainstorm that occurs with a specified recurrence interval in Dane County. For example, a 10-year, 24-hour design storm defines a rainstorm that occurs over 24 hours, with a recurrence interval of 10 years. The amounts associated with these storms are further defined as follows:

- (a) 1-year, 24-hour design storm = 2.49 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.
- (b) 2-year, 24-hour design storm = 2.84 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.
- (c) 10-year, 24-hour design storm = 4.09 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.
- (d) 100-year, 24-hour design storm = 6.66 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.
- (e) 200-year, 24-hour design storm = 7.53 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.
- (f) 500-year, 24-hour design storm = 8.94 inches over 24 hours duration using the MSE4 NRCS Rainfall Distribution.

Development means any of the following: ~~residential, commercial, industrial or institutional land uses and associated roads.~~

- (a) Structural development, including construction of a new building or other structure;
- (b) Expansion or alteration of an existing structure that results in an increase in the ground surface dimensions of the building or structure;
- (c) Land disturbing activity; or
- (d) Creation or expansion of impervious surfaces.

Direct conduits to groundwater means wells, sinkholes, swallets, fractured bedrock at the surface, mine shafts, nonmetallic mines, tile inlets discharging to groundwater, quarries, or depressional groundwater recharge areas over shallow fractured bedrock.

Director means the City of Stoughton Director of Planning & Development or his or her designee.

Easement means an interest in land owned by another that creates a nonpossessory right to enter and use the land of another and obligates the owner not to interfere with the uses authorized by the easement.

Easement holder means the holder of a legally enforceable easement that authorizes the activity on the land for which a permit is sought under this article, including all required maintenance and access obligations.

Effective infiltration area means the area of the infiltration system that is used to infiltrate runoff and does not include the area used for site access, berms or pre-treatment.

Erosion and soil erosion means the detachment and movement of soil or rock fragments by water, wind, ice or gravity.

Excavation means any act by which organic matter, earth, sand, gravel, rock or any other similar material is cut into, dug, quarried, uncovered, removed, displaced, relocated or bulldozed and shall include the resulting conditions.

Existing development means buildings and other structures and impervious area existing prior to August 22, 2001.

Fill means any act by which earth, sand, gravel, rock or any other material is deposited, placed, replaced, pushed, dumped, pulled, transported or moved to a new location and shall include the resulting conditions.

Final stabilization means that all land disturbing construction activities at the construction site have been completed and that a uniform perennial vegetative cover has been established with a density of at least 70 percent ~~has been established. of the cover for the unpaved areas and areas not covered by permanent structures or that employ equivalent permanent stabilization measures.~~

Financial security instrument means a surety bond, performance bond, maintenance bond, irrevocable letter of credit or similar guarantees submitted to the local approval authority to ensure that requirements of this article are carried out in compliance with approved plans ~~the stormwater management plan.~~

Green Infrastructure means practices that use plant or soil systems, permeable pavement or other permeable surfaces or substrates, storm water harvest and reuse, or landscaping to store, infiltrate, or evapotranspire storm water and reduce flows to sewer following practices: rainwater harvesting/reuse, rain gardens, bio retention systems, infiltration basins, platers that are connected to roof drainage, vegetates swales, permeable pavement, green roofs, and rain barrels.

Gully erosion means a severe loss of soil caused by or resulting in concentrated flow of sufficient velocity to create a defined flow channel.

Heavily disturbed site means a site where an area of land is subjected to significant compaction due to the removal of vegetative cover or earthmoving activities, including filling.

Hydrologic soil group (HSG) has the meaning used in the runoff calculation methodology promulgated by the United States Natural Resources Conservation Service Engineering Field Manual for Conservation Practices.

Impervious surface means any land cover that prevents rain or melting snow from soaking into the ground, such as roofs (including overhangs), roads, sidewalks, patios, driveways and parking lots. For purposes of this article, all road, driveway or parking surfaces, including gravel surfaces, shall be considered impervious, unless specifically designed to encourage infiltration and approved by the local approval authority.

~~*Infill* means an undeveloped area of land located within an existing urban sewer service area, surrounded by development or development and natural or man-made features where development cannot occur.~~

Infiltration, for the purposes of this article, refers to any precipitation that does not leave the site as surface runoff. Also known as “stay-on”.

Infiltration system means a device or practice such as a basin, trench, rain garden or swale designed specifically to encourage infiltration, but does not include natural infiltration in pervious surfaces such as lawns, redirecting of rooftop downspouts onto lawns or minimal infiltration from practices such as swales or road side channels designed for conveyance and pollutant removal only.

Land conservation committee or *LCC* means the county land conservation committee created under Wis. Stats. § 92.06.

Land disturbing activities means any land alterations or disturbances that may result in soil erosion, sedimentation or change in runoff including but not limited to removal of ground cover, grading, excavating and filling of land.

Lightly disturbed site means a site where an area of land is subjected to minor compaction due to the limited removal of vegetative cover or earthmoving activities.

Local approval authority means the municipal staff, agency or contracted entity charged by the local unit of government with responsibility for enforcing stormwater and erosion control ordinances, and specifically includes the city planning department.

Local land division ordinance means any county, city, village or town ordinance adopted under Wis. Stats. ch. 236 to regulate the division of land.

Local zoning ordinance means any county, city, village or town ordinance adopted under Wis. Stats. §§ 59.69, 59.692, 59.693, 60.61, 60.62, 61.351, 61.354, 62.23, 62.231, or 62.234 to regulate the use of land.

Maximum extent practicable (MEP) means a level of implementing best management practices in order to achieve a performance standard specified in this chapter which takes into account the best available technology, cost effectiveness and other competing issues such as human safety and welfare, endangered and threatened resources, historic properties and geographic features. MEP allows flexibility in the way to meet performance standards and may vary based on the performance standard and site conditions.

New development means development that results in the cumulative increase of 20,000 square feet of impervious surface to a site since August 21, 2001. Sites may be a combination of new development and redevelopment. any of the following activities:

- ~~(1) Structural development, including construction of a new building or other structures;~~
- ~~(2) Expansion or alteration of an existing structure that results in an increase in the surface dimensions of the building or structure;~~
- ~~(3) Land disturbing activities; or~~
- ~~(4) Creation or expansion of impervious surface.~~

Non-erosive velocity means a rate of flow of stormwater runoff, usually measured in feet per second, that does not erode soils. Non-erosive velocities vary for individual sites, taking into account topography, soil type and runoff rates.

NR means Natural Resources Wis. Admin. Code.

Peak flow means the maximum rate of flow of water at a given point in a channel, watercourse, or conduit resulting from the predetermined storm or flood.

Pervious surface means any land cover that permits rain or melting snow to soak into the ground.

Plan means an erosion control plan required by section 10-125 or a stormwater management plan required by section 10-126.

Plan review agency means the municipal staff, agency or qualified contracted entity charged by the local unit of government with responsibility for reviewing stormwater and erosion control plans under the local stormwater and erosion control ordinance.

Plat review officer means the municipal staff, agency or contracted entity charged by the local unit of government with responsibility for reviewing land divisions, certified survey maps or subdivision plats or any combination thereof under Wis. Stats. ch. 236.

Permittee means a land owner or easement holder who has applied for a permit under this article and is responsible for the requirements of the permit.

Post-construction site means a construction site following the completion of land disturbing activity and final site stabilization.

~~*Post-development* refers to the extent and distribution of land cover types after proposed site development. means the extent and distribution of land cover types anticipated to occur under conditions of full development of the submitted plan. The term "post-development" is used to match pre-development and post-development stormwater peak flows as required by this article.~~

~~*Pre-development* means refers to the extent and distribution of land cover types present before the initiation of the proposed land development activity, assuming that all land uses prior to land disturbing activity are in "good" condition as described in the Natural Resources Conservation Service Technical Release 55, "Urban Hydrology for Small Watersheds" (commonly known as TR-55). The term "pre-development" is used to match pre-development and post-development stormwater peak flows as required by this article. In a situation Where the cumulative impervious surface created after August 21, 2001 exceeds 20,000 square feet, the pre-development condition shall be that prior to August 21, 2001. Where cumulative impervious surface created after August 21, 2001 exceeds the 20,000 square foot threshold, the pre-development conditions shall be those prior to the proposed land disturbance.~~

Recharge means the portion of the average annual rainfall that infiltrates the soil and becomes groundwater. Recharge does not include evaporation, transpiration, or runoff from the site.

~~*Redevelopment* means development that replaces existing impervious surfaces or results in the cumulative increase of less than 20,000 square feet of impervious surface to a site since August 21, 2001 on sites predominately developed as commercial, industrial, institutional or multifamily. Sites may be a combination of new development and redevelopment. any construction, alteration or improvement exceeding 4,000 square feet of land disturbance performed on sites where the existing site is predominantly developed as commercial, industrial, institutional or multifamily residential uses. Projects may include a mix of redevelopment and new impervious surfaces. New impervious surfaces added as a result of redevelopment are subject to subsection 10-126(1).~~

Runoff curve number (RCN) has the meaning used in the runoff calculation methodology promulgated by the United States Natural Resources Conservation Service Engineering Field Manual for Conservation Practices.

Sediment means solid earth material, both mineral and organic, that is in suspension, is being transported or has been moved from its site of origin by air, water, gravity or ice, and has come to rest on the earth's surface at a different site.

Sedimentation means the deposition of eroded soils at a site different from the one where the erosion occurred.

Sheet and rill erosion means a loss of soil caused by sheet flow or shallow concentrated flow, and characterized by an absence of channeling or a relatively uniform loss across the exposed upper layer of the soil or shallow irregular scouring of the soil surface.

Site means the bounded area described in an erosion control plan or stormwater management plan.

Slope means the net vertical rise over horizontal run, expressed as a percentage, which represents a relatively homogeneous surface incline or decline over the area disturbed.

Soil loss rate means the rate, usually measured in tons per acre per year, at which soil is transported beyond the perimeter of a given control site and which occurs as a result of sheet and rill erosion. The term "soil loss rate" does not apply to soil movement resulting from concentrated flow such as gully or bank erosion.

Storm events means the precipitation amounts that occur over a 24-hour period that have a specified recurrence interval for the county. For example, one-year, two-year, ten-year and 100-year storm events mean the precipitation amounts that occur over a 24-hour period that have a recurrence interval of one, two, ten and 100 years, respectively.

Stormwater means the flow of water which results from, and which occurs during and immediately following, a rainfall, snow melt or ice melt event.

Stormwater management means any measures taken to permanently reduce or minimize the negative impacts of stormwater runoff quantity and quality after land development activities.

Stormwater runoff means the waters derived from rains falling or snow melt or ice melt occurring within a drainage area, flowing over the surface of the ground and collected in channels, watercourses or conduits.

Street reconstruction means removal and replacement of the road subgrade, where existing stormwater conveyance systems are modified.

Structure means any human made object with form, shape and utility, either permanently or temporarily attached to, placed upon, or set into the ground, stream bed or lake bed.

Transportation facility means a highway, a railroad, a public mass transit facility, a public-use airport, a public trail or any other public work for transportation purposes such as harbor improvements under Wis. Stats. § 85.095(1)(b). "Transportation facility" does not include building sites for the construction of public buildings and buildings that are places of employment that are regulated by the department pursuant to Wis. Stats. § 281.33.

Unnecessary hardship means that circumstance where special conditions, which were not self-created, affect a particular property and make strict conformity with regulations unnecessarily burdensome or unreasonable in light the purposes of this article.

(Code 1986, § 20.01; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-01-07, § 1, 1-9-2007; Ord. No. 0-18-2013, § 1, 8-13-2013; Ord. No. 0-3-2017, 3-14-2017)

Cross reference(s)—Definitions generally, § 1-2.

Sec. 10-123. Legislative findings.

- (a) The common council finds that construction site erosion and uncontrolled stormwater runoff from land disturbing and land development activities have significant adverse impacts upon regional water resources and the health, safety, property and general welfare of the community, and diminish the public enjoyment and use of natural resources. Specifically, soil erosion and stormwater runoff can:
- (1) Carry sediment, nutrients, pathogens, organic matter, heavy metals, toxins and other pollutants to regional lakes, streams and wetlands;
 - (2) Diminish the capacity of water resources to support recreational and water supply uses and a natural diversity of plant and animal life;
 - (3) Clog existing drainage systems, increasing maintenance problems and costs;
 - (4) Cause bank and channel erosion;

-
- (5) Increase downstream flooding;
 - (6) Reduce groundwater recharge, which may diminish stream base flows and lower water levels in regional lakes, ponds and wetlands;
 - (7) Contaminate drinking water supplies;
 - (8) Increase risk of property damage and personal injury; and
 - (9) Cause damage to agricultural fields and crops.
- (b) The common council also finds that effective sediment and stormwater management depends on proper planning, design and timely installation of conservation and management practices and their continuing maintenance.

(Code 1986, § 20.02; Ord. No. 0-21-06, § 1, 5-9-2006)

Sec. 10-124. Purpose and intent.

- (a) The purpose of this article is to set forth the minimum requirements for construction site erosion control and stormwater management that will diminish threats to public health, safety, public and private property and natural resources of the city.
- (b) This article is intended to regulate construction site erosion and stormwater runoff, to accomplish the following objectives:
- (1) Promote regional stormwater management by watershed;
 - (2) Minimize sedimentation, water pollution from nutrients, heavy metals, chemical and petroleum products and other contaminants, flooding and thermal impacts to the water resources of the city;
 - (3) Promote infiltration and groundwater recharge;
 - (4) Protect functional values of natural water courses and wetlands;
 - (5) Provide a single, consistent set of performance standards that apply to all developments within the city and are consistent with the standards set forth by the county;
 - (6) Achieve an 80 percent reduction in sediment load rates to the county waters compared to no controls for all new development, a 40 percent reduction in sediment load rates compared to no controls for all redevelopment and street reconstruction and a 20 percent reduction in sediment load rates compared to no controls for existing developments;
 - (7) Ensure no increase in temperature of stormwater post-construction in order to protect cold water communities;
 - (8) Ensure no increase in the rate of surface water drainage from sites during or after construction; and
 - (9) Protect public and private property from damage resulting from runoff or erosion.

(Code 1986, § 20.03; Ord. No. 0-21-06, § 1, 5-9-2006)

Sec. 10-125. Applicability of requirement for erosion control permits.

Unless expressly exempted by section 10-127, an erosion control permit under section 10-129 shall be required and all construction site erosion control provisions of this article shall apply to any of the following activities in the city:

-
- (1) Land disturbing activity in excess of 4,000 square feet.
 - (2) Land disturbing activity that involves the excavation or filling, or a combination of excavation and filling, in excess of 400 cubic yards of material.
 - (3) Land disturbing activity that disturbs more than 100 lineal feet of road ditch, grass waterway or other land area where surface drainage flows in a defined open channel; including the placement, repair or removal of any underground pipe, utility or other facility within the cross section of the channel.
 - (4) Any new public or private roads or access drives longer than 125 feet.
 - (5) Development that requires a ~~subdivision~~ plat, as defined in the applicable local land division ordinance(s).
 - (6) Land disturbing activity that disturbs less than 4,000 square feet of land, including the installation of access drives, that the local approval authority determines to have a high risk of soil erosion or water pollution, or that may significantly impact a lake, stream or wetland area. Examples of activities with a high risk of soil erosion or water pollution may include, but are not limited to, land disturbance on erodible soil or disturbance adjacent to lakes, rivers, streams or wetlands. All such determinations made by the local approval authority shall be in writing, unless waived by the applicant.

(Code 1986, § 20.04; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-126. Applicability of requirement for stormwater control permits.

Unless otherwise exempted by section 10-127, a stormwater control permit under section 10-129 shall be required and all stormwater management provisions of this article shall apply to any of the following activities within the city:

- (1) Any development after August 22, 2001, that results in the cumulative addition of 20,000 square feet of impervious surface to the site;
- (2) Any development that requires a ~~subdivision~~ plat, as defined in the applicable local land division ordinance(s);
- (3) Any development that requires a certified survey map, as defined in the applicable local ordinance(s); for property intended for commercial or industrial use;
- ~~(4) Redevelopment, as defined in section 10-122.~~
- (4) Land disturbing activity in excess of 4,000 square feet on sites developed as commercial, industrial, institutional or multifamily.
- (5) Notwithstanding the exemptions in section 10-127, other land development activities, including, but not limited to redevelopment or alteration of existing buildings and other structures, that the local approval authority determines may significantly increase downstream runoff volumes, flooding, soil erosion, water pollution or property damage or significantly impact a lake, stream or wetland area. All such determinations shall be made in writing unless waived by the applicant.

(Code 1986, § 20.05; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-127. Exemptions and clarifications.

- (a) The following activities are exempt from all requirements of this article:

-
- (1) Agricultural activities. Stormwater discharges from the planting, growing, cultivating and harvesting of crops for human or livestock consumption and pasturing or yarding of livestock, including sod farm and tree nurseries are not regulated by this section. This exemption does not include the construction of structures such as barn, manure storage facilities or barnyard runoff control systems.
 - (2) Silviculture activities, including tree nursery operations, tree harvesting operations, reforestation, tree thinning, prescribed burning, and pest and fire control. Clearing and grubbing of an area of a construction site is not a silviculture activity.
 - ~~(3) One-family and two-family dwelling units regulated under the Wisconsin Uniform Dwelling Code. Land disturbing activities in excess of one acre, or not associated with the construction of a dwelling, or less than one acre but part of a larger common plan of development or sale under jurisdiction of the city, are not exempt from this article.~~
 - ~~(4) Transportation facility construction projects directed and supervised by the state department of transportation in accordance with section NR 216.42(5), Wis. Admin. Code.~~
 - ~~(5) Routine maintenance for project sites that have less than five acres of land disturbance if performed to maintain the original line and grade, hydraulic capacity or original purpose of the facility.~~
 - (3) Projects specifically exempted from local erosion control ordinances under state or federal statute. It is the responsibility of the landowner to demonstrate such exemption with documentation acceptable to the local approval authority.
- (b) The following activities are exempt from the construction site erosion control provisions of section 10-125:
- ~~(1) Projects specifically exempted from local erosion control ordinances under state or federal statute. It is the responsibility of the landowner to demonstrate such exemption with documentation acceptable to the local approval authority.~~
 - (1) One-family and two-family dwelling units regulated under the Wisconsin Uniform Dwelling Code. Land disturbing activities in excess of one acre, or not associated with the construction of a dwelling, or less than one acre but part of a larger common plan of development or sale under jurisdiction of the city, are not exempt from this article.
 - (2) Projects subject to an approved shoreland erosion control permit under chapter 31.
 - (3) Soil conservation, stream and adjacent wetland protection and restoration practices such as terraces, run-off diversions, grassed waterways, cattle and equipment crossings, cattle watering access, water control structures, dikes, ditch plugs, tile breaks and sediment removal catchments, when implemented according to plans and designs approved by the Natural Resources Conservation Service or U.S. Fish & Wildlife Service of the U.S. Department of the Interior, Wisconsin Department of Natural Resources or the Dane County Land and Water Resources Department, provided that any such project involving land disturbing activity equal to or greater than one (1) acre shall also comply with the performance standards in section 10-130(c).
- (c) The following activities are exempt from the runoff rate control standards of section 10-127 (a)(3) stormwater management provisions of section 10-126:
- (1) Redevelopment. New development sites with less than ten percent connected imperviousness based on complete development of the post construction site, provided the cumulative area of all impervious surfaces is less than one acre. This exemption does not include an exemption from the protective area standard of section 10-131(b)(9) of this chapter.
 - (2) Agricultural facilities and practices. Municipal road or county highway projects not exempted under section 10-127 (a)(3) where all of the following conditions are met:

-
- a. The purpose of the project is only to meet current state or federal design or safety guidelines;
 - b. Proposed impervious areas are within existing public right-of-way;
 - c. All other requirements of section 10-131 are met; and
 - d. The project does not include the addition of new driving lanes.
- ~~(3) Underground utility construction, but not including the construction of any above ground structures associated with utility construction.~~
- (d) The following activities are exempt from the infiltration standards described in section 10-131 (a)(6):
- (1) Redevelopment
 - (b) New development with less than 10% connected imperviousness, provided the cumulative area of all impervious surface is less than one acre.
 - (c) Agricultural facilities and practices.
 - (d) Areas where the infiltration rate of the soil is less than 0.6 inches/hour measured at the bottom of the proposed infiltration system where the soil layer is not easily removed or manipulated.
 - (e) Expansion of municipal or county roads.

(Code 1986, § 20.06; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-18-2013, § 2, 8-13-2013; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-128. Preliminary review letter.

- (a) *Purpose and intent.* A preliminary review letter provides a potential permit applicant with an initial simple evaluation of whether erosion and stormwater control standards can be met for a proposed site, lot layout and construction design. This review is intended to assist applicants in preparing general site plans and other submittals necessary to obtain an erosion control and stormwater permit. A preliminary review letter does not guarantee that an erosion or stormwater control plan will be approved or that a permit will be issued. Erosion and stormwater control plans and permit applications must meet all applicable standards and criteria for approval.
- (b) *Application procedure.*
 - (1) The local approval authority may charge a fee to compensate for provision of the cost of the preliminary review letter process.
 - (2) Any person may apply for a preliminary review letter by submitting an application that contains the information required by the local approval authority.
 - (3) The local approval authority may require a preliminary review letter prior to accepting a petition for rezoning or conditional use application under applicable ordinances, or city planning staff may require a preliminary review letter prior to accepting an application for a certified survey map under applicable ordinances where the following apply:
 - a. The proposal would involve one or more acres within either the current or proposed boundaries of a commercial or industrial zoning district.
 - b. The proposed lot or rezone area configuration would necessitate driveways, access roads or other construction that would clearly require an erosion control plan and/or stormwater management plan under section 10-125 and/or 10-126.

-
- c. Natural features of the site including, but not limited to slope, soils, wetlands, or hydrology are such that, in the opinion of the city planning staff or a designated authority, substantial risk of erosion, flooding or other environmental or public safety hazard exists.
 - (4) Unless expressly waived by the applicant, decisions by the local approval authority to require a preliminary review letter shall be made in writing and shall detail the reasons why the authority believes there to be a substantial risk of erosion, flooding or hazard.

(Code 1986, § 20.07; Ord. No. 0-21-06, § 1, 5-9-2006)

Sec. 10-129. Erosion and stormwater control permits and administration.

- (a) No activity meeting the criteria described in section 10-125 or section 10-126 shall occur and no building permits may be issued, until an erosion control and stormwater control permit is issued by the local approval authority.
- (b) *Application requirements.* The applicant must provide the following when requesting a permit:
 - (1) Completed application form signed by the landowner or easement holder. If the applicant is not the landowner or easement holder, a notarized statement authorizing the applicant to act as agent on behalf of the landowner or easement holder must be provided. By signing the statement, the permittee shall be bound by all requirements of this ordinance and the terms of any permit issued to the applicant. If the applicant is an easement holder or an agent of an easement holder the landowner must be given notice and a copy of the permit application and all supporting documentation. Proof of such notice must be provided with the application. The local approval authority shall provide the landowner with copies of all permits and notifications issued regarding permit applications;
 - ~~a. The application must be signed by the landowner or include a notarized statement signed by the landowner authorizing the applicant to act as the landowner's agent and bind the landowner to the terms of this article.~~
 - ~~b. If a landowner appoints an agent to submit an application pursuant to subsection (b)(1)a. of this section, the landowner shall be bound by all of the requirements of this article and the terms of any permit issued to the agent.~~
 - ~~a.(2) Fees as required by section 10-135;~~
 - ~~b.(3) Copy of preliminary review letter, as described in section 10-128, if applicable.~~
 - ~~c.(4) If required by section 10-125, an erosion control plan meeting all the requirements of section 10-130; standards of section NR 216.46, Wis. Admin. Code, and the applicable performance standards in section NR 151.11, Wis. Admin. Code, for construction sites or section NR 151.23, Wis. Admin. Code, for transportation facility sites, and section 10-130, or a simplified checklist as described in section 10-130.
 - 1. Simplified plan materials, described in section 10-130(b), may be provided for sites with land disturbance less than 20,000 square feet, slopes steeper than 6% disturbed for less than 15 days, and slopes flatter than 6% disturbed for less than 6 months.~~
 - ~~d.(5) If required by section 10-126, a stormwater management plan meeting all of the standards of section 10-131 and a draft maintenance agreement as described in section 10-131 (a) (10) NR 216.47, Wis. Admin. Code, and the applicable performance standards in sections NR 151.121 to NR 151.128, Wis. Admin. Code, for construction sites or sections NR 151.242 to NR 151.249, Wis. Admin. Code, for transportation facility sites, and section 10-131 and a draft maintenance agreement as described in subsection 10-131(a)(10).~~

-
- (6) Copies of permits or permit applications or approvals required by any other governmental entity.
 - (7) A proposed timetable and schedule for completion and installation of all elements of approved erosion control and stormwater management plans and a detailed schedule for completion of construction.
 - (8) An estimate of the cost of completion and installation of all elements of the approved erosion control and stormwater management plans.
 - (9) Evidence of financial responsibility to complete the work proposed in the plan. The local approval authority may require a financial security instrument sufficient to guarantee completion of the project.
 - (10) A plan to manage solid waste on construction sites such as discarded building materials, concrete truck washout, chemicals, litter and sanitary waste to reduce adverse impacts from stormwater runoff.

(c) *Approval process.*

- (1) The local approval authority shall verify that the permit application is complete under subsection (b) of this section. The local approval authority or applicant shall forward the plan to the plan review agency for review and approval. The plan review staff shall review the plan for compliance with the standards identified in sections 10-130 and 10-131.
- (2) The plan review staff shall either approve the submitted plan or notify the local approval authority of any deficiencies. Staff engaged in this review and approval process shall be certified where appropriate by the state department of commerce for this purpose.
- (3) The local approval authority shall notify the applicant in writing of any deficiency in the proposed plan and the applicant shall be given an opportunity to correct any deficiency.

~~(4) Where installed stormwater practices will be privately owned, an affidavit which describes the property by legal description, notifying future prospective purchasers of the existence of a stormwater permit issued under this article and applicable plan, timetables and potential liability imposed by subsection (h)(3) of this section for failure to bring the property into compliance with this article after notification, shall be recorded with the county register of deeds prior to issuance of an erosion and stormwater control permit. Such information shall also be noted on every plat and certified survey map.~~

(4) Where installed stormwater practices will be implemented, an affidavit which describes the property by legal description, notifying future prospective purchasers of the existence of a stormwater permit issued under this article and applicable plan, timetables and potential liability imposed by subsection (h)(3) of this section for failure to bring the property into compliance with this article after notification, shall be recorded with the county register of deeds prior to issuance of an erosion and stormwater control permit. Such information shall also be noted on every plat and certified survey map.

- (5) Upon approval of the plan review agency, the erosion control or stormwater management permit shall be issued by the local approval authority after the applicant has met all other requirements of this article.

(d) *Permit requirements.*

- (1) The erosion control plan shall be implemented prior to the start of any land disturbing activity and shall be maintained over the duration of the project. Stormwater components of the plan shall be maintained in perpetuity.
- (2) The permittee is responsible for installation of all BMPs as identified in the approved erosion control plan and stormwater management plan.

-
- (3) The permittee is responsible for successful completion of the erosion control plan and the stormwater management plan. The permittee shall be liable for all costs incurred, including environmental restoration costs, resulting from noncompliance with an approved plan.
 - (4) Application for a permit shall constitute express permission by the permittee and landowner for the local approval authority to enter the property for purposes of inspection under subsection (e) of this section or curative action under subsection (h)(3) of this section. The application form shall contain a prominent provision advising the applicant and landowner of this requirement.
 - (5) All incidental mud-tracking off-site onto adjacent public thoroughfares shall be cleaned up and removed by the end of each working day using proper disposal methods.
 - (6) A copy of the approved permit and erosion control plan shall be kept on the project site, in a place readily accessible to contractors, engineers, local approval authority, inspection staff and other authorized personnel.
- (e) *Inspections.*
- (1) Application for a permit under this article shall constitute permission by the applicant and landowner for the local approval authority to enter upon the property and inspect during the construction phase prior to the inspections pursuant to subsections (e)(4) and (e)(6) of this section, as necessary to confirm compliance with the requirements of this article.
 - (2) As part of the plan approval process, the local approval authority shall determine the minimum number of inspections required to ensure compliance. The site of any regulated land disturbing activity shall be inspected once every 30 days, or more frequently as determined by the local approval authority during the construction phase with assistance from the plan review agency staff.
 - (3) The permittee shall notify the local approval authority within ten days after installation of all practices in an approved erosion control plan and achievement of soil stabilization. The permittee shall inspect the site weekly, prior to every forecasted rain fall of one-half inch or greater, and within 24 hours following a rainfall of one-half inch or greater. Written documentation of each inspection shall be maintained at the construction site and shall include the time, date and location of inspection, the phase of land disturbance at the construction site, person conducting the inspection, assessment of control practices, and a description of any erosion or sediment control measure installation or maintenance performed in response to the inspection.
 - (4) The local approval authority shall inspect the property to verify compliance with the erosion control plan within ten days of notification of soil stabilization.
 - (5) Within ten days after installation of all practices in an approved stormwater management plan, the permittee shall notify the local approval authority and submit drawings documenting construction. A professional engineer shall submit as-built certification to ensure that constructed stormwater management practices and conveyance systems comply with the specifications included in the approved plans. At minimum, as-built certification shall include a set of drawings comparing the approved stormwater management plan with what was constructed. Other information shall be submitted as required by the local approval authority.
 - (6) The local approval authority shall inspect the property to verify compliance within ~~thirty ten~~ thirty days of notification.
 - (7) Maintenance is the responsibility of the owner and facilities are subject to inspection and orders for repairs.
- (f) *Permit transfers.*

-
- (1) When a permittee and landowner act to transfer an interest in property subject to an approved plan prior to completion of the proposed steps to attain soil stabilization, the permittee must secure approval from the local approval authority.
 - (2) When a permittee and landowner transfer ownership, possession or control of real estate subject to either or both an uncompleted erosion control and a stormwater management plan, the successor in interest to any portion of the real estate shall be responsible to control soil erosion and runoff and shall comply with the minimum standards provided in this article.
 - (3) When ownership, possession or control of property subject to an uncompleted erosion control or stormwater management plan, or both, is transferred, the former owner (seller) shall notify the new owner (buyer) as to the current status of compliance with notice to the authority and provide a copy of the erosion control plan or stormwater management plan, or both.
 - (4) Transfers of interest in real estate subject to an approved, uncompleted plan may be conducted consistent with this article under any of the following arrangements:
 - a. The transferee shall file a new, approved erosion control or stormwater management plan, or both, with the authority.
 - b. The transferee shall obtain an approved assignment from the authority as subpermittee to complete that portion of the approved plan regulating soil erosion and runoff on the transferee's property.
 - c. The permittee shall provide the authority with a duly completed and executed continuing surety bond or certified check in an amount sufficient to complete the work proposed in the approved plan; at the time of transfer, the permittee may seek to reduce the surety bond or certified check to the appropriate amount to complete remaining work. If the transferor enters into escrow agreements with transferees to complete an approved plan, these funds shall be available to the authority to attain plan compliance. When an approved erosion control plan and, if required, a stormwater management plan is or are not completed as proposed, the authority may use the surety bond to complete remaining work to achieve plan compliance.
- (g) *Plan or permit amendments.* Any proposed modifications to approved plans, construction schedules or alterations to accepted sequencing of land disturbing site activities shall be approved by the local approval authority in consultation with the plan review agency prior to implementation of such changes. One permit revision is allowed at no charge. The second and subsequent revisions, ~~to a maximum of five revisions,~~ cost \$50.00 each.
- (h) *Violations and enforcement:*
- (1) Stop work order.
 - a. Whenever the local approval authority finds any noncompliance with the provisions of this article, the local approval authority shall attempt to communicate with the owner or person performing the work to obtain immediate and voluntary compliance if such person is readily available. If the owner or person performing the work is not readily available, that person refuses to voluntarily comply immediately or the noncompliance presents an immediate danger or will cause or threatens to cause bodily injury or damage to off-site property including, but not limited to off-site runoff, the local approval authority shall post in a conspicuous place on the premises, a stop work order which shall cause all activity not necessary to correct the noncompliance to cease until noncompliance is corrected.
 - b. The stop work order shall provide the following information:
 1. Date of issuance;

-
2. Reason for posting;
 3. The signature of the inspector posting the card; and
 4. The address or legal description of the property.
- c. It shall be a violation of this article for the unauthorized removal of the stop work order from the premises.
- (2) In addition to posting a stop work order, the local approval authority shall provide notification to the owner or contractor by personal service, written notice by certified mail, electronic mail or facsimile transmission.
 - a. The permittee, landowner and contractor shall have 24 hours from the time and date of notification by the local approval authority to correct any noncompliance with the plan when notification is by either personal communication of noncompliance to the owner or contractor or their respective agents or written notice sent by certified mail to the owner or the contractor.
 - b. If notice is not provided under subsection (h)(2)a of this section, the permittee and landowner shall have 72 hours to correct any noncompliance with the plan when notification is by posting notice in a conspicuous place on the site or sending notice by facsimile transmission to the owner or contractor.
 - (3) If any noncompliance is not corrected within the time periods specified in subsection (h)(2)a or (h)(2)b of this section, the permittee and landowner authorize the local approval authority to take any action, to perform any work or commence any operations necessary to correct conditions upon the subject property where notice of noncompliance has been issued to bring the property into conformance with plan requirements. The permittee and landowner further consent to reimburse the authority for the total costs and expenses of such actions and such reimbursement may be collected as a special charge upon the property for current services rendered as provided by law.
 - (4) If the permittee has filed an appeal under subsection 10-134(a)(1) prior to the expiration of the time for compliance under subsection (h)(2) of this section, the local approval authority may take action, perform work or correct conditions only to the extent necessary to protect against or correct an imminent hazard or a condition that will cause or threatens to cause personal injury or damage to off-site property.
- (i) *Penalties.*
 - (1) Any person, firm, company or corporation, owner, occupant or other user of the premises who violates, or refuses to comply with, or resists the enforcement of, any of the provisions of this article shall be subject to a forfeiture of not less than \$200.00 nor more than \$1,000.00 and costs of prosecution. Each day that a violation exists shall constitute a separate offense, and such violations shall be prosecuted in municipal court.
 - (2) Any person who has the ability to pay any forfeiture entered against him under this article, but refuses to do so may be confined in the county jail until such forfeiture is paid, but in no event to exceed 30 days. In determining whether an individual has the ability to pay a forfeiture, all items of income and all assets may be considered regardless of whether or not such income or assets are subject to garnishment, lien or attachment by creditors.
 - (j) *Timeframe and expiration.*
 - (1) Erosion control plan timetables and construction schedules must begin within one year of the date of the application for permit is submitted.
 - (2) All applications for permit shall expire:

-
- a. One year from the date the applicant is notified of an application deficiency, if the applicant has not submitted additional information to adequately address the deficiency within one year; or
 - b. Three years from the date of application.
- (3) Erosion control permits shall expire:
- a. Upon the stabilization date included in the approval plan, ~~or and included in the analysis provided to meet the requirements of ten.~~
 - b. ~~Three years after permit issuance, whichever is sooner. A maximum of three years after the permit is issued.~~

(Code 1986, § 20.08; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-18-2013, § 3, 8-13-2013; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-130. Erosion control plan requirements.

- (a) *Plan materials.* Erosion control plans required under section 10-125 may include consideration of adjoining landowners' cooperative efforts to control transport of sediment and, except as specifically exempted in this section, shall include at a minimum the information required in section NR 216.46, Wis. Admin. Code, including the following information:
- (1) Property lines, lot dimensions, and limits of disturbed area including disturbed areas within (5) feet of the property line;
 - (2) Limits of impervious area including buildings. Include all public and private roads, interior roads, driveways, parking lots, and indicate type of paving and surfacing material;
 - (3) All natural and artificial water features including, but not limited to lakes, ponds, streams, (including intermittent streams), and ditches; and areas of natural woodland or prairie. The plan must show ordinary high-water marks of all navigable waters, 100-year flood elevations and delineated wetland boundaries. A certified flood zone determination and/or wetland delineation may be required at the applicant's expense;
 - (4) Cross sections of and profiles of channels, swales, and road ditches;
 - (5) Culvert sizes;
 - (6) Direction of flow of runoff;
 - (7) Watershed size for each drainage area;
 - (8) Design discharge for ditches and structural measures;
 - (9) Runoff velocities;
 - (10) Fertilizer and seeding rates and recommendations;
 - (11) Time schedules for stabilization of ditches and slopes;
 - (12) Description of methods by which sites are to be developed and a detailed land disturbance schedule including time schedules for stabilization of ditches and slopes;
 - (13) Provision for sequential steps mitigating erosive effect of land disturbing activities to be followed in appropriate order and in a manner consistent with accepted erosion control methodology suitable to proposed sites and amenable to prompt revegetation, including runoff calculations as appropriate;
 - (14) Provisions to prevent mud-tracking off-site onto public thoroughfares during the construction period;

-
- (15) Provisions to disconnect impervious surfaces, where feasible;
 - (16) Provisions to prevent sediment delivery to, and accumulation in, any proposed or existing stormwater conveyance system;
 - (17) Copies of permits or permit applications required by any other unit of government or agency;
 - (18) Existing and proposed elevations (referenced to the National Geodetic Vertical Datum of 1929) and existing and proposed contours in the area, where deemed necessary; [and]
 - (19) Any other information necessary to reasonably determine the location, nature and condition of any physical or environmental features of the site.

~~(b) *Simplified plan checklists.* Applicants may submit erosion control proposals using simplified checklists of standard erosion control practices, on a standard form approved by the local approval authority, wherever all of the following conditions exist:~~

- ~~(1) The site does not exceed 20,000 square feet in area; and~~
- ~~(2) Soil on slopes steeper than six percent will be exposed for less than 15 days.~~
- ~~(3) Soil on slopes less than six percent will be exposed for less than six months.~~

(b) *Simplified plan materials.* Sites meeting the conditions described in subsection may instead provide, at a minimum, the following information:

- (1) Narrative describing the project;
- (2) Site plan of known scale that includes property lines, disturbed area limits, impervious area limits (existing and proposed), natural and artificial water features, 100-yr flood plain, delineated wetland boundaries, and location of all proposed erosion control practices;
- (3) Contours (existing and proposed);
- (4) Watershed size for each drainage area, including areas draining to the site;
- (5) Provisions to prevent tracking sediment onto public roads;
- (6) Provisions to prevent sediment delivery to, and accumulation in, any proposed or existing stormwater conveyance systems;
- (7) Proposed erosion control practices
- (8) Construction schedule that includes dates of erosion control practice installation, start of land disturbance and site stabilization.
- (9) Culvert sizes (existing and proposed)
- (10) Any other information necessary to reasonable determine the location, nature and conditions of any physical or environmental features of the site.

~~(c) *Review of simplified plan checklists.* Simplified plan checklists shall be reviewed by the local approval authority for completeness and accuracy.~~

(c) *Erosion control performance standards.* The erosion control plan shall be designed to meet the following performance standards and other requirements of this section. Proposed design, suggested location and phased implementation of effective, practicable erosion control measures for plans shall be designed, engineered and implemented to achieve the following results:

~~(1) Proposed design, suggested location and phased implementation of effective, practicable erosion control measures for plans shall be designed, engineered and implemented to achieve the following results:~~

~~(1)a-~~ Prevent gully and bank erosion;

~~(2)b-~~ Limit total off-site permissible annual aggregate soil loss for exposed areas resulting from sheet and rill erosion to an annual, cumulative soil loss rate not to exceed 5.0 tons sediment yield per acre annually, as determined using the U.S. Natural Resources Conservation Service Technical Guide. Erosion control measures for plan approval need not attempt to regulate soil transportation within the boundaries of the applicant's site. seven and one-half tons per acre annually; and

~~(3)c-~~ ~~Discharges from new construction sites must have a~~ Provide stable outlet capable of carrying designed flow as required in subsection 10-131(b)(3), at a non-erosive velocity. Outlet design must consider flow capacity and flow duration. This requirement applies to both the site outlet and the ultimate outlet to stormwater conveyance or waterbody.

~~(4)~~ Prevent or reduce all of the following:

a. The deposition of soil from being tracked onto streets by vehicles.

b. The discharge of sediment from disturbed areas into on-site storm water inlets.

c. The discharge of sediment from disturbed areas into adjacent waters of the state.

d. The discharge of sediment from drainage ways that flow off the site.

e. The discharge of sediment by dewatering activities.

f. The discharge of sediment eroding from soil stockpiles existing for more than 7 days.

g. The transport by runoff of chemicals, cement and other building compounds and materials on the construction site during the construction period.

~~(d)~~ Implementation. The BMPs used to comply with this section shall be implemented as follows:

(1) Erosion and sediment control practices shall be constructed or installed before land disturbing activity begins.

(2) Erosion and sediment control practices shall be maintained until final stabilization.

(3) Final stabilization activity shall commence when land disturbing activity ceases and final grade has been reached on any portion of the site.

(4) Temporary stabilization activity shall commence when land disturbing activity has temporarily ceased and will not resume for a period exceeding 14 calendar days.

(5) BMPs that are no longer necessary for erosion and sediment control shall be removed.

~~(e) (4) a-~~ Grading within five (5) feet of property line. Except as authorized in this section, the topography within five feet of any property line at the commencement of any development shall remain unchanged.

~~(1)1-~~ When land disturbing activities associated with development occur within five feet of any property line, finished grades in that area shall be restored to the topography in existence before the land disturbing activity began. A positive slope of one-half inch vertical per one foot horizontal within five feet of the property line is allowed to provide proper drainage away from a one or two family residence.

-
- ~~(2)2-~~ The established grade of the adjoining property shall determine the finished grade at the property line for any development. The owner of the property under development bears the burden of proof as to the established grade at the property line and the topography within five feet of the property line. The director of planning and development may require detailed site grading plans of existing and proposed conditions to be submitted before commencement of land disturbing activities.
- ~~(3)3-~~ Existing drainage ways and drainage easements along property lines shall be maintained including, but not limited to, natural watercourses and stormwater management areas shown on subdivision plats and certified survey maps.
- ~~(4)4-~~ Development in floodplain districts requiring fill to comply with chapter 30 is exempt from this subsection.
- ~~(5)5-~~ Upon written application, the director of planning and development may authorize exceptions resulting in changes to the existing topography at and within five feet of any property line that would promote the purposes stated in this section. ~~An exception authorized under this subsection may not direct additional stormwater runoff toward adjacent properties. Proposed exceptions may include but are not limited to, retaining walls, berms and other structures, and other changes to existing grade at and within five feet of a property line. The director of planning and development may require the submittal of detailed site grading plans of existing and proposed conditions including, but not limited to, detailed topographical information of the subject and adjoining properties, before land disturbing activities commence, if the following are provided:~~
- ~~a. 1-~~ The intent of the grading and an explanation of its necessity, and
 - ~~b. 2-~~ Documentation showing that stormwater runoff will not negatively affect adjacent properties.
- ~~(5)6—An erosion control plan required under this section shall meet the requirements of section NR 216.46, Wis. Admin. Code, and the applicable performance standards in section NR 151.11, Wis. Admin. Code, for construction sites or section NR 151.23, Wis. Admin. Code, for transportation facility sites.~~

(Code 1986, § 20.09; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-131. Stormwater management plan requirements.

- (a) *Plan materials.* Stormwater management plans required under section 10-126 shall satisfy all of the requirements in subsection (b) of this section, and shall address at a minimum the following information:
- (1) Name, address, and telephone number for the following or their designees: landowner; developer; project engineer for practice design and certification; person(s) responsible for installation of stormwater management practices; and person(s) responsible for maintenance of stormwater management practices prior to the transfer, if any, of maintenance responsibility to another party.
 - (2) A narrative describing the proposed project, including an implementation schedule for planned practices;
 - (3) Identification of the entity responsible for long-term maintenance of the project;
 - (4) A map showing drainage areas for each watershed area;
 - (5) A summary of runoff peak flow rate calculations, by watershed area, including:
 - a. Pre-existing peak flow rates;
 - b. Post-~~construction~~development peak flow rates with no detention;
 - c. Post-~~construction~~development peak flow rates with detention;

-
- d. Assumed runoff curve numbers (RCNs); and
 - e. Time of concentration (Tc) used in calculations;
- (6) A complete site plan and specifications, signed by the person who designed the plan. All plans shall be drawn to an easily legible scale, shall be clearly labeled and shall include, at a minimum, all of the following information:
- a. Property lines and lot dimensions, including all existing and proposed buildings and setbacks;
 - b. All public and private roads, interior roads, driveways and parking lots. Show traffic patterns and type of paving and surfacing material;
 - c. All natural and artificial water features, including but not limited to lakes, ponds, streams (including intermittent streams), and ditches. Show ordinary high-water marks of all navigable waters, 100-year flood elevations and delineated wetland boundaries, if any. If not available, appropriate flood zone determination or wetland delineation, or both, may be required at the applicant's expense;
 - d. Depth to bedrock;
 - e. Depth to seasonal high water table;
 - f. The extent and location of all soil types as described in the Dane County Soil Survey, slopes exceeding 12 percent, and areas of natural woodland or prairie;
 - g. Existing and proposed elevations (referenced to the North American Vertical Datum of 1988, where available) and existing and proposed contours in the area requiring a grading and filling permit;
 - h. Elevations, sections, profiles and details as needed to describe all natural and artificial features of the project;
 - i. Soil erosion control and overland runoff control measures, including runoff calculations as appropriate;
 - j. Detailed construction schedule;
 - k. Copies of permits or permit applications required by any other governmental entities or agencies;
 - l. Any other information necessary to reasonably determine the location, nature and condition of any physical or environmental features;
 - m. Location of all stormwater management practices;
 - n. All existing and proposed drainage features;
 - o. The location and area of all proposed impervious surfaces; and
 - p. The limits and area of the disturbed area.
 - q. All buildings and outdoor uses, existing and proposed, including all dimensions and setbacks.
- (7) Engineered designs for all structural management practices;
- (8) A description of methods to control oil and grease or written justification for not providing such control;
- (9) If required under subsection (b)(6) of this section, a description and plans to control temperature of runoff;

(10) A maintenance plan and schedule for all permanent stormwater management practices as recorded on the affidavit required in subsection 10-129(c)(4). ~~This plan shall, at a minimum, contain the following information and provisions:~~

- ~~a. Identification of the owner(s) of the land parcel(s) where BMP(s) are located;~~
- ~~b. Long term maintenance plan. A description of all long term maintenance activities that will likely be required for each BMP included in the agreement, and an estimated time interval between each activity;~~
- ~~c. Access. Authorization for vehicle access, including a minimum 15-foot wide access easement dedicated to the city, to allow for future BMP maintenance work.~~
- ~~d. Maintenance responsibility. Identification of the person(s), organization, municipality or other entity responsible for long term maintenance of the stormwater BMP.~~
- ~~e. Inspections shall be performed by the responsible party. The responsible party shall maintain a log of inspection activities.~~

(11) A summary of infiltration calculations including:

- a. Pre-developed infiltration volume;
- b. Calculated infiltration volume goal;
- c. Achieved post development infiltration volume.
- d. Flood elevation for the 200-yr design storm and proposed minimum opening elevation.

(b) *Stormwater management performance standards.* Proposed design, suggested location and phased implementation of effective, practicable stormwater management measures for plans shall be designed, engineered and implemented to achieve the following results:

(1) ~~Sediment Control. For redevelopment sites where the redevelopment will be replacing older development that was subject to post construction performance standards of section NR 151, Wis. Admin. Code, in effect on or after October 1, 2004, the permittee shall meet the total suspended solids reduction, peak flow control, infiltration, and protective area standards applicable to the older development or meet the redevelopment standards of this section, whichever is more stringent.~~

~~(2) Total suspended solids. BMPs shall be designed, installed and maintained to control total suspended solids carried in runoff from the post construction site as follows:~~

- a. For new development, design practices to retain soil particles greater than five microns on the site (80 percent reduction) resulting from a one-year design storm 24-hour storm event (two and one-half inches over a 24-hour duration), according to approved procedures and assuming no sediment resuspension;
- b. For redevelopment resulting in exposed surface parking lots and associated traffic areas, design practices to retain soil particles greater than 20 microns on the entire site (40 percent reduction) resulting from a one-year design storm, according to approved procedures and assuming no sediment resuspension. Under no circumstances shall the site's existing sediment control level or trapping efficiency be reduced as a result of the redevelopment.
 - 1. For redevelopment with proposed impervious surface area greater than 80% of existing, the first 0.5 inches of runoff from impervious surfaces must be captured using green infrastructure.

- d. ~~For in-fill development by design, reduce to the maximum extent practicable, the total suspended solids load by 80 percent, based on an average annual rainfall, as compared to no runoff management controls. No person shall be required to exceed an 80 percent total suspended solids reduction to meet the requirements of this subdivision.~~
 - e. ~~Maximum extent practicable. If the design cannot meet a total suspended solids reduction performance standard in subsections (a)–(c), the stormwater management plan shall include a written, site-specific explanation of why the total suspended solids reduction performance standard cannot be met and why the total suspended solids load will be reduced only to the maximum extent practicable.~~
 - f. ~~Off-site drainage. When designing BMPs, runoff draining to the BMP from off-site shall be taken into account in determining the treatment efficiency of the practice. Any impact on the efficiency shall be compensated for by increasing the size of the BMP accordingly.~~
- (23) Oil and grease control. For all ~~stormwater plans for~~ commercial or industrial developments and all other uses where the potential for pollution by oil or grease, or both, exists, the first one-half inch of runoff will be treated using the best oil and grease removal technology available. This requirement may be waived by the plan reviewer only when the applicant can demonstrate that installation of such practices is not necessary.
- (34) ~~Peak discharge. Runoff rate control.~~
- a. ~~For new development, design practices to maintain pre-development peak runoff rates for the 1, 2, 10, 100, and 200-year, 24-hour design storms.~~
 - b. ~~The maximum runoff curve number (RCN) used in such calculations shall be those shown in Table 1. The TR-55 specified curve numbers for other land uses shall be used. Heavily disturbed sites will be lowered one permeability class for hydrologic calculations. Lightly disturbed areas, or areas where practices have been implemented to restore soil structure to pre-developed conditions, require no modification.~~

Runoff Curve Number	Hydrologic Soil Group*			
	A	B	C	D
Woodland	30	55	70	77
Grassland	39	61	71	78
Cropland	51	68	78	83

* When dual HSG are specified, the drained condition shall be assumed

- b. ~~Runoff rate control—design standards. Except for redevelopment projects, all stormwater facilities shall be designed, installed and maintained to effectively accomplish the following:~~
 1. ~~Maintain predevelopment peak runoff rates for the one-year, 24-hour storm event (2.49 inches over 24-hour duration using the NRCS MSE4 storm distribution).~~
 2. ~~Maintain predevelopment peak runoff rates for the two-year 24-hour storm event (2.84 inches over 24-hour duration using the NRCS MSE4 storm distribution).~~
 3. ~~Maintain predevelopment peak runoff rates for the ten-year 24-hour storm event (4.09 inches over 24-hour duration using the NRCS MSE4 storm distribution).~~

4. ~~Safely pass the 100-year 24-hour storm event (6.66 inches over 24-hour duration using the NRCS-MSE4 storm distribution).~~

(4) ~~Outlets. Discharges from new construction sites must have a~~ Provide stable outlet capable of carrying designed flow as required in section 10-131(b)(3), at a non-erosive velocity. Outlet design must consider flow capacity and flow duration. This requirement applies to both the site outlet and the ultimate outlet to stormwater conveyance or waterbody.

(56) Infiltration.

- a. For ~~both residential and nonresidential~~ new developments, design practices to infiltrate sufficient runoff volume so that post-development infiltration volume shall be at least 90 percent of the pre-development infiltration volume, based upon average annual rainfall.
- b. The maximum runoff curve number (RCN) used in such calculations shall be those specified in ~~subsection (b)(3)a~~ Table 1.
- c. If, when designing appropriate infiltration systems, more than two percent of the site is required to be used as effective infiltration area, the applicant may alternately design infiltration systems and pervious surfaces to meet or exceed the annual pre-development recharge rate. The annual pre-development recharge rate shall be determined from the Wisconsin Geological and Natural History Survey's 2009 report, *Groundwater Recharge in Dane County, Estimated by a GIS-Based Water-Balanced Model* or subsequent updates to this report, or by a site specific analysis using other appropriate techniques. If this alternative design approach is taken, at least two percent of the site must be used for infiltration.
- d. *Pre-treatment.* Before infiltrating runoff, pre-treatment shall be required for parking lot runoff and for runoff from new road construction in commercial, industrial, and institutional areas that will enter an infiltration system. The pre-treatment shall be designed to protect the infiltration system from clogging prior to scheduled maintenance and to protect groundwater quality.
- e. Separation distances. Infiltration practices shall be located so that the characteristics of the soil and the separation distance between the bottom of the infiltration system and the elevation of seasonal high groundwater or the top of bedrock are in accordance with Table 2:

Source Area	Separation Distance	Soil Characteristics
Industrial, Commercial, Institutional Parking Lots and Roads	5 Feet or More	Filtering Layer
Residential Arterial Roads	5 Feet or More	Filtering Layer
Roofs Draining to Subsurface Infiltration Practices	1 Foot or More	Native or Engineered Soil with Particles Finer than Coarse Sand
Roofs Draining to Surface Infiltration Practices	Not Applicable	
All Other Impervious Source Areas	3 Feet or More	Filtering Layer

- f. *Prohibitions.* ~~Notwithstanding subparagraphs a. through e.,~~ infiltration systems may not be installed in any of the following areas:

-
1. Areas associated with tier 1 industrial facilities identified in section NR 216.21(2)(a), Wis. Admin. Code, including storage, loading, rooftop and parking.
 2. Storage and loading areas of tier 2 industrial facilities identified in section NR 216.21(2)(b), Wis. Admin. Code.
 3. Fueling and vehicle maintenance areas.
 4. Areas within 1,000 feet up gradient or within 100 feet down gradient of direct conduits to groundwater.
 - ~~5. Separation distances. Infiltration practices shall be located so that the characteristics of the soil and the separation distance between the bottom of the infiltration system and the elevation of seasonal high groundwater or the top of bedrock are in accordance with Table 2:~~
 56. Areas with runoff from industrial, commercial and institutional parking lots, roads and residential arterial roads with less than five feet separation distance from the bottom of the infiltration system to the elevation of seasonal high groundwater or the top of bedrock.
 67. Areas within 400 feet of a community water system well as specified in section NR 811.16(4), Wis. Admin. Code, ~~or within the separation distances listed in section NR 812.08, Wis. Admin. Code, for any private well or non-community well~~ for runoff infiltrated from commercial, industrial and institutional land uses or regional devices for residential development.
 78. Areas where contaminants of concern, as defined in section NR 720.03(2), Wis. Admin. Code, are present in the soil through which infiltration will occur.
- gf. Alternate use of runoff.* Where alternate uses of runoff are employed, such as for toilet flushing, laundry or irrigation, such alternate use shall be given equal credit toward the infiltration volume required by this section.
- hg. Minimizing groundwater pollution.* According to ch. NR 151, Wis. Admin. Code, infiltration systems designed in accordance with this section shall, to the extent technically and economically feasible, minimize the level of pollutants infiltrating to groundwater and shall maintain compliance with the preventive action limit at a point of standards application in accordance with ch. NR 140, Wis. Admin. Code. However, if site-specific information indicates that compliance with the preventive action limit is not achievable, the infiltration system may not be installed or shall be modified to prevent infiltration to the maximum extent practicable.
- ~~h. Exemptions. Runoff from the following areas may be credited toward meeting the requirement when infiltrated, and/or infiltration practices located in the following areas may be credited under the following conditions, but the decision to infiltrate runoff from these source areas or under these conditions is optional:~~
- ~~1. Parking areas and access roads less than 5,000 square feet for commercial development.~~
 - ~~2. Parking areas and access roads less than 5,000 square feet for industrial development not subject to the prohibitions in subparagraph e.~~
 - ~~3. Except as provided under subsection (b)(1) of this section, redevelopment post-construction sites.~~
 - ~~4. Roads in commercial, industrial, and institutional land uses, and arterial roads.~~

5. ~~Areas where the infiltration rate of the soil is less than six/tenths of one inch/hour measured at the bottom of the proposed infiltration system where the soil layer is not easily removed or manipulated.~~

~~(67) Thermal control. The stormwater management plan shall include provisions and practices to reduce the temperature of runoff for sites located within the watershed of a river or stream identified by the state department of natural resources as:~~

~~a. The stormwater management plan shall include provisions and practices to reduce the temperature of runoff for sites located within the watershed of a river or stream identified by the state department of natural resources as:~~

~~1a. A cold water community as identified through sections NR 102.04(3)(a), NR 104, Wis. Admin. Code, and class I, class II, and class III trout streams identified in "Wisconsin Trout Streams," DNR publication PUB-FH-806-2002 or its successor.~~

~~2b. Rivers or streams proposed by the state department of natural resources as cold water communities and class I, II, and III trout streams.~~

~~b.(8) Thermal control continued. The stormwater management plan does not have to meet the requirement in subsection 10-131(b)(56) of this section if the applicant can justify by use of a model approved by the county conservationist that practices are not necessary because the temperature increase of runoff from the site post-development will be zero.~~

~~c.(9) Thermal control continued. A current list and maps of affected watersheds shall be available for reference at the office of the local approval authority and/or the plan review agency.~~

~~(710) Closed Watersheds. Pre-development modeling must include closed watersheds areas. Sites within closed watersheds must be designed to achieve 90% stay-on without exemption. Sites with areas subject to inundation (ground elevations below the watershed outlet elevation) must include:~~

~~a1. a stable outlet capable of handling overflow events.~~

~~b2. an emergency drawdown or pumping plan.~~

~~c3. storage capacity for back-to-back 100-yr storm events.~~

~~11 (10) Protective areas performance standard.~~

~~a. Definition. In this section, "protective area" means an area of land that commences at the top of the channel of lakes, streams and rivers, or at the delineated boundary of wetlands, and that is the greatest of the following widths, as measured horizontally from the top of the channel or delineated wetland boundary to the closest impervious surface. However, in this section, "protective area" does not include any area of land adjacent to any stream enclosed within a pipe or culvert, so that runoff cannot enter the enclosure at this location.~~

~~1. For outstanding resource waters and exceptional resource waters, 75 feet.~~

~~2. For perennial and intermittent streams identified on a U.S. geological survey seven and one-half minute/series topographic map, or a county soil survey map, whichever is more current, 50 feet.~~

~~3. For lakes, 50 feet.~~

~~4. For wetlands not subject to paragraphs 5. or 6., 50 feet.~~

~~5. For highly susceptible wetlands, 75 feet. Highly susceptible wetlands include the following types: calcareous fens, sedge meadows, open and coniferous bogs, low prairies, coniferous swamps, lowland hardwood swamps, and ephemeral ponds.~~

Note(s)—Information on wetland types, including ephemeral ponds, is available at (608) 266-7012.

- 6.—For less susceptible wetlands, ten percent of the average wetland width, but no less than ten feet nor more than 30 feet. Less susceptible wetlands include: degraded wetlands dominated by invasive species such as reed canary grass; cultivated hydric soils; and any gravel pits, or dredged material or fill material disposal sites that take on the attributes of a wetland.
- 7.—In paragraphs 4. to 6., determinations of the extent of the protective area adjacent to wetlands shall be made on the basis of the sensitivity and runoff susceptibility of the wetland in accordance with the standards and criteria in section NR 103.03, Wis. Admin. Code.
- 8.—Wetland boundary delineation shall be made in accordance with section NR 103.08 (1m), Wis. Admin. Code. This paragraph does not apply to wetlands that have been completely filled in compliance with all applicable state and federal regulations. The protective area for wetlands that have been partially filled in compliance with all applicable state and federal regulations shall be measured from the wetland boundary delineation after fill has been placed. Where there is a legally authorized wetland fill, the protective area standard need not be met in that location.
- 9.—For concentrated flow channels with drainage areas greater than 130 acres, ten feet.
- 10.—Notwithstanding paragraphs 1. to 9., the greatest protective area width shall apply where rivers, streams, lakes, and wetlands are contiguous.

Note(s)—A stream or lake is not eligible for a lower protective area width even if contiguous to a less susceptible wetland.

- b.—*Applicability.* This section applies to post-construction sites located within a protective area, except those areas exempted pursuant to subsection d.
- c.—*Requirements.* The following requirements shall be met:
 - 1.—Impervious surfaces shall be kept out of the protective area entirely or to the maximum extent practicable. If there is no practical alternative to locating an impervious surface in the protective area, the storm water management plan shall contain a written site specific explanation.
 - 2.—Where land disturbing construction activity occurs within a protective area, adequate sod or self-sustaining vegetative cover of 70 percent or greater shall be established and maintained where no impervious surface is present. The adequate sod or self-sustaining vegetative cover shall be sufficient to provide for bank stability, maintenance of fish habitat, and filtering of pollutants from upslope overland flow areas under sheet flow conditions. Non-vegetative materials such as rock riprap, may be employed on the bank as necessary to prevent erosion such as on steep slopes or where high velocity flows occur.

Note(s)—It is recommended that seeding of non-invasive vegetative cover be used in the protective areas. Some invasive plants are listed in ch. NR 40, Wis. Admin. Code. Vegetation that is flood and drought tolerant and can provide long-term bank stability because of an extensive root system is preferable. Vegetative cover may be measured using the line transect method described in the University of Wisconsin extension publication number A3533, titled "Estimating Residue Using the Line Transect Method".

- 3.—Best management practices such as filter strips, swales, or wet detention ponds, that are designed to control pollutants from non-point sources, may be located in the protective area.

~~Note(s)—Other laws, such as Wis. Stats. ch. 30 and chs. NR 103, 115, 116, and 117, Wis. Admin. Code, and their associated review and approval processes may apply in the protective area.~~

~~d. — Exemptions. This section does not apply to any of the following:~~

- ~~1. — Except as provided under subsection (b)1. of this section, redevelopment post construction sites.~~
- ~~2. — In-fill development areas less than five acres.~~
- ~~3. — Structures that cross or access surface waters such as boat landings, bridges, and culverts.~~
- ~~4. — Structures constructed in accordance with Wis. Stats. § 59.692(lv).~~
- ~~5. — Areas of post construction sites from which the runoff does not enter the surface water, including wetlands, without first being treated by a BMP to meet the requirements of sections NR 151.122 to 151.123, Wis. Admin. Code, except to the extent that vegetative ground cover is necessary to maintain bank stability.~~

~~Note(s)—A vegetated protective area to filter runoff pollutants from post construction sites described in paragraph 5. is not necessary since the runoff at that location is treated prior to entering the surface water. Other practices necessary to meet the requirements of this section, such as a swale or pond, will need to be designed and implemented to reduce runoff pollutants prior to runoff entering a surface water of the state. The requirements of ch. NR 103, Wis. Admin. Code, still apply and should be considered before runoff is diverted to or from a wetland.~~

(c) *Stormwater management goals.* The following standards shall be met whenever possible, and proposed design, suggested location and implementation of practices to meet these goals shall be included in plans:

- (1) For existing development, design practices to retain soil particles greater than 40 microns on the site (20 percent reduction) resulting from a one-year 24-hour storm event, according to approved procedures, and assuming no sediment resuspension.
- (2) For street reconstruction, design practices to retain soil particles greater than 20 microns on the site (40 percent reduction) resulting from a one-year 24-hour storm event, according to approved procedures, and assuming no sediment resuspension.

(Code 1986, § 20.10; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-01-07, § 1, 1-9-2007; Ord. No. 0-18-2013, § 4, 8-13-2013; Ord. No. 0-3-2017, 3-14-2017; Ord. No. 0-16-2020, 8-11-2020)

Sec. 10-132. Off-site stormwater management.

Off-site stormwater management is allowed, provided that provisions are made to manage stormwater by an off-site facility, and provided that all of the following conditions for the off-site facility are met:

- (1) The facility is in place;
- (2) The facility is designed and adequately sized to provide a level of stormwater control that at least meets the requirement standards of the ordinance ~~from which this article is derived~~; and
- (3) The local approval authority is satisfied that the facility has a legally obligated entity responsible for its long-term operation and maintenance.

(Code 1986, § 20.11; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-133. Technical standards and specifications.

The design of all best management practices designed to meet the requirements of this article shall comply with the following technical standards:

- (1) Natural Resources Conservation Service's "Wisconsin Field Office Technical Guide, Chapter 4" or its successor.
- (2) Applicable construction or erosion control or stormwater management standards by the Wisconsin Department of Natural Resources;
- (3) Any other technical methodology approved by the Dane County conservationist.

(Code 1986, § 20.12; Ord. No. 0-21-06, § 1, 5-9-2006; Ord. No. 0-3-2017, 3-14-2017)

Sec. 10-134. Appeals and variances.

(a) *Appeals.*

- (1) Any person aggrieved by any decision of the local approval authority pursuant to this article may appeal to the public works committee. Such appeal shall be taken within 30 days after the challenged decision. Notice of appeal setting forth the specific grounds for the appeal shall be filed with the local approval authority and the city clerk. The zoning administrator shall provide to the public works committee the record upon which the action appealed from was taken.
- (2) The public works committee shall fix a reasonable time for the hearing of the appeal and publish a class 2 notice thereof under Wis. Stats. ch. 985, as well as give due notice to the parties in interest, and decide the appeal within a reasonable time. Upon the hearing, any party may appear in person or by agent or attorney.
- (3) The public works committee may, in conformity with the provisions of this article, reverse or affirm, wholly or partly, or modify the order, requirement, decision or determination appealed from and may make such order, requirement, decision or determination as ought to be made and shall have all the powers of the officer from whom the appeal is taken.
- (4) The concurring vote of a majority of the public works committee shall be necessary to reverse the decision of the local approval authority.

(b) *Variances.*

- (1) An applicant may include in the application a request for a variance from the requirements of section 10-130 or section 10-131. No variance shall be granted unless the applicant demonstrates and the local approval authority, after consultation with the Dane County conservationist, finds that all of the following conditions are present:
 - a. Enforcement of the standards set forth in this article will result in unnecessary hardship to the landowner;
 - b. The hardship is due to exceptional physical conditions unique to the property;
 - c. Granting the variance will not adversely affect the public health, safety or welfare, nor be contrary to the spirit, purpose and intent of this article;
 - d. The project will have no impact upon any of the stated purposes as set forth in section 10-123;

-
- e. The applicant has proposed an alternative to the requirement from which the variance is sought that will provide equivalent protection of the public health, safety and welfare, the environment and public and private property;
 - f. The net cumulative effect of the variance will not impact downstream conditions; and
 - g. Existing regional facilities are shown to meet the performance standards of this article.
- (2) If all of the conditions set forth in subsection (b)(1) of this section are met, a variance may only be granted to the minimum extent necessary to afford relief from the unnecessary hardship, with primary consideration to water quality and impact downstream conditions.
- (3) A variance from the provisions of subsections 10-131(b)(1), (b)(2) and (b)(6) may only be granted if:
- a. The applicant has met the requirements of subsection (b)(1) of this section; and
 - b. The applicant will be denied all reasonable and beneficial use of the property if the variance is denied.
- (4) A person aggrieved by a variance determination by the local approval authority may appeal the decision to the public works committee pursuant to subsection (a) of this section.
- (5) A person aggrieved by a decision of the public works committee regarding a variance may appeal that decision to the board of appeals.

(Code 1986, § 20.13; Ord. No. 0-21-06, § 1, 5-9-2006)

Sec. 10-135. Permit fees.

- (a) The erosion control and stormwater management permit fee shall be ~~\$475200.00~~.
- (b) The fee for a preliminary review letter shall be \$200.00. If a preliminary approval letter has been obtained, the erosion control and stormwater management base fee shall be waived.
- (c) For sites required to obtain an erosion control permit under section 10-125, there shall be an additional fee of ~~\$0.0047~~ per square foot of disturbed area.
- (d) For sites required to obtain a stormwater control permit under section 10-126, there shall be an additional fee of ~~\$0.005~~ \$0.020 per square foot of impervious area and ~~\$0.0025~~ \$0.020 per square foot of redeveloped impervious area.
- (e) The common council authorizes city administrative staff to modify the permit and fee amounts listed in this erosion control and stormwater management ordinance on January 1 of each year following the adoption of this article, based upon the CPI-U for the Midwest Region, size "d" as prepared by the Federal Department of Labor, so long as the cumulative interim percentage of inflation warrants an increase of \$5.00 or more on a round dollar amount and an increase to the next whole cent on amounts expressed in hundredths of a dollar. These amounts may also be modified by future council action.
- (f) *Late filing fee.* When an applicant or landowner begins work requiring a permit before obtaining the permit or appropriate approvals, the fees shall be doubled.
- (g) Additional costs. Additional costs incurred by the City over the permit fee amount will be billed to the applicant or property owner.

(Code 1986, § 20.14; Ord. No. 0-21-06, § 1, 5-9-2006)

2. This ordinance shall be in full force and effect from and after its date of publication.

DIRECTOR

Date: March 13, 2023

To: Public Works Committee

From: Rodney J. Scheel
 Director of Planning & Development

Subject: Erosion Control & Stormwater Management Ordinance Revisions

The City mirrors regulatory standards for erosion control and stormwater management. The City also contracts with Dane County to provide plan review and inspection services for certain applicable projects to be consistent with County regulations and interpretations. Therefore, the proposed revisions are intended to align with County regulations. The County updated their ordinances in November 2022.

The proposed revisions to repeal and recreate ordinance Sections 10-122 through 10-135 are shown with changes in red. Proposed additions are underlined and deletions are cross-stricken.
